BLANKETS AT PYRO SHIELD

Preheat and Post Weld Heat Treat (PWHT) Blankets

Our preheat (1,000°F fabric) and our post weld heat treat (PWHT) blankets (2,000°F fabric) are reusable and can be used up to 50 thermal cycles with one blanket. We can also design these blankets with or without tabs.

Slow Cool Blankets

Our slow cool blankets are designed to insulate the work area to help maintain temperatures to avoid welding cracks.

Fire Blankets

Our fire blanket can extinguish flames at the early stages, preventing thousands of dollars of damage and down time caused by water or Halon. It can also be used as a wrap to escape. They are typically housed in easy to mount canisters. Our fire blankets are custom made and can be fabricated as needed.

Welding Blankets

We offer a variety of welding blankets and curtains for numerous applications, such as light and heavy duty. Our blankets are made fit for applications where spark, splatter, and light slag are found. All blankets and curtains can be fabricated to most any size and grommets can be placed where needed.
